
Intrex for Mac OS helps Mac users create database-supported web applications and Intranets

London, 31 March 2011. United Planet (www.unitedplanet.com), one of the leading developers of enterprise portal software in Europe, has introduced Intrex for Mac OS to its proven portfolio of Business Adapters for popular operating platforms. The new portal software will enable the Apple community to create web-based business applications and process-optimised enterprise portals, without the need for lengthy or complex programming.

Axel Wessendorf, CEO of United Planet, explains that: “Until now, there have only been a few tools available on the market for Apple users to create database-supported applications themselves. Users have typically used Apple’s “FileMaker”. The new Business Adapter for Mac OS offers an alternative approach which will enable self-powered web applications, intranets and mobile applications to be created for Apple computer users with a simple ‘point and click’.”

At the heart of the new portal software for Mac is a user friendly graphical user interface designed to streamline application development. Pre-prepared components of an application page can be pulled into a working area using Drag&Drop and then arranged to suit individual business requirements.

The software’s graphic Process Designer can also be used to link the applications with each other and to transfer operational processes into electronic workflows. This feature makes it possible to accelerate and significantly facilitate the business processes of the organisation.

Wessendorf adds: “Intrex for Mac OS allows Mac users to create an enterprise portal very fast. It helps them to improve the efficiency with which information is administrated and operational processes are controlled by automating those processes where possible. Initial development

and any subsequent adaptations or enhancements can be performed quickly and easily, which means that businesses will not have to rely on assistance from external programmers. This is essential in the current economic climate because it means that a company can adapt its processes and increase flexibility at any time to the changing market conditions.”

A 2-user licence for Intrexx is available for an initial period for only 49 Euros. Each additional licence costs 55 Euro. Delivery includes a comprehensive portal with more than 50 pre-prepared business applications and templates to increase application development times.

Visit the Intrexx Application Store (www.intrexx.com/en/appstore) to download other applications available from United Planet.

About United Planet

United Planet is one of the leading developers of Enterprise Portal software in Europe. Its Java based, standard software Intrexx enables companies to create Enterprise Portals, Intranets and Web Applications cost effectively, without the need for programming by using 'drag and drop' technology and pre-created solutions for quality management, document management and process management to optimise internal workflow. Intrexx runs on Windows as well as on Mac OS X, Linux and Sun Solaris, and incorporates several Business Adapters to ensure that third-party data from Lotus Notes and other ERP solutions can be easily integrated in the Intrexx Portal. A special Business Adapter for MS Office also makes it possible to integrate and edit Microsoft Office Documents without the need for Microsoft Office SharePoint Server (MOSS). United Planet is headquartered in Freiburg, Germany and also has offices in Windsor. The company is supported by over 100 Business Partners worldwide.
