United Planet simplifies web application development for Lotus Notes users

London, 29 October 2008. United Planet (www.unitedplanet.com), a leading developer of Enterprise Portal software in Europe, has introduced a Lotus Notes Business Adapter for its out-of-the-box portal, intranet and web application software, Intrexx Xtreme. The Adapter will simplify the development of web applications, web services and process management for the Intrexx Xtreme Lotus Notes community.

Commenting on the launch, Alexander Marsch, managing director of United Planet Limited, said: “Many businesses have standardised on Lotus Notes for the administration of their extensive data records. Our Lotus Notes Business Adapter will enable these companies to use Domino Server data records in their enterprise portals and integrate existing Lotus Notes data into new or production systems more easily. The creation of a portal interface for Lotus Notes will provide a central access point for important information across the business and increase usability for end users across the board.”

The development of Lotus Notes databases in the web browser will dramatically improve user friendliness. A smart web interface can be created for all employees, making it much easier to operate Notes data and applications therefore eliminating the need for a Lotus client for users. The Intrexx User Manager will enable companies to set clear read and write rules for each employee, and will also facilitate secure external access by suppliers, customers and partners to individual data.

United Planet has been able to provide this level of access by making use of the Java API within Lotus Notes which allows the Business Adapter both read and write access to Lotus Notes data. All operations of the Business Adapter are possible without any major modifications to the existing Domino Server system.

The benefit of this approach is that existing mail directories and other user-related data, such as e-mail and calendars, can be readily imported into the portal. Lotus Notes data can immediately be used for process

management, or with the help of web services, quickly and easily prepared for further software solutions and external partners.

Intrexx Xtreme also makes it easier to develop web applications. Lotus Notes data can be transferred using the Business Adapter to a Java-based system, which does not require the Lotus programming language to be used. Developers can use Intrexx Xtreme's graphical user interface to simplify the entire process, using the drag and drop menu to create ever more complex applications and structures within a short amount of time.

The Lotus Notes Adapter can be purchased immediately via www.intrexx.com/de/Lotus.

About United Planet

United Planet is one of the leading developers of Enterprise Portals in Europe. Its Java based, standard software, Intrexx Xtreme, enables companies to create out-of-the-box Enterprise Portals, Intranets and Web Applications cost effectively, without the need for programming by using 'drag and drop' technology and pre-created solutions for quality management, document management and process management to optimise internal workflow. Intrexx Xtreme runs on Windows as well as on Linux and Sun Solaris, and incorporates several Business Adapters to ensure that third-party data from Microsoft, Lotus Notes and other ERP solutions can be easily integrated in the Intrexx Portal. United Planet is headquartered in Germany and also has offices in Windsor in the UK. The company is supported by over 100 Business Partners worldwide.

More detailed information about United Planet and Intrexx Xtreme portal software can be found at: www.intrexx.com.
