Writing Conventions

In this handbook, text passages will be displayed in *italics* when they refer to settings in the displayed dialogs. Menu items that are available in context menus can, in addition, always be selected from the main menu. Main menu items will not be described if they are not available in the context menu. A description of the general main menu items can be found in the  *Center* handbook. Programming code in the text will be displayed in the Courier font. Context menus can be opened by clicking with the right mouse button on the described element.

In the following, *<xtreme>* refers to your Intrex installation path; under Windows, for example, this is usually  *C:\xtreme*. On Linux, the normal install path is  */opt/xtreme/*. The following symbols will be used for designation of special kinds of information:

-  Important information
-  Tips and background information
-  References to additional information in an Intrex Xtreme handbook
-  Directories
-  URLs
-  Buttons in dialogs or assistants

Previous Knowledge

For this handbook, you require no special previous training. You can find helpful information in the Intrex Xtreme handbooks  *Center*,  *Portal Designer* and  *Application Designer*.

1. Portal Pages in Intrex Xtreme

The screenshot shows the Intrex Xtreme portal interface. At the top, there is a navigation bar with 'Home' and several dropdown menus: Business Management, Sales, Purchasing, Marketing, Finance, Human Resources, and Engineering. On the left, a vertical menu lists various portal sections: About us, Newsletter, Good to know, Current Phone Calls, Company Calendar, Phone Book, Idea Management, Cafeteria Menu, Bulletin Board, and First Aid. The main content area is divided into several portlets:

- Our Wiki:** Shows 'Total amount of articles: 743' and lists links for 'Tutorial', 'My first day - Welcome new employees!', 'Guitar Advisor', 'Competitors', and 'Marketing'.
- News und Nachrichten:** Displays a 'Newsletter' entry for 'Fender & Roland cooperating' dated 28.03.2007.
- Turnover:** A table with columns for month, sales actual, plan, and difference.

	Sales actual	Plan	Difference
Jan 2007	97.840,04	93.000,00	4.840,04
Feb 2007	94.159,78	85.000,00	9.159,78
Mar 2007	87.856,00	85.000,00	2.856,00
Apr 2007	73.018,00	90.000,00	-16.982,00
Mai 2007	71.199,85	90.000,00	-18.800,15
Jun 2007	70.637,62	90.000,00	-19.362,38
Jul 2007	70.110,12	80.000,00	-9.889,88
Aug 2007	84.375,29	80.000,00	4.375,29
- My Phone Calls:** A table listing calls with columns for 'Call from', 'Answered by', and 'Received on'.

Call from	Answered by	Received on
Ben Willard	Timo Steinbruch	15.08.2007 13:16
Frank Black	Petra Wille	13.08.2007 09:12
Helen Marsh	Petra Wille	14.08.2007 15:54
Mr. Smith	Timo Steinbruch	15.08.2007 13:16
- Notification of Claims:** Lists claims such as 'HP Color Laser Jet 9500 Serie' (Toner leakage, 08.03.2007), 'Dell PrecisionTM 690' (Power supply damaged, 27.02.2007), and another 'Dell PrecisionTM 690' (Water damage, 22.02.2007).
- Today's Absences:** Lists absences for 'Petra Wille' (Meeting in-house), 'Jack Hush' (Workshop), and 'Ingo Iduna' (Appointment with illustrator).

In Intrex Xtreme, all kinds of information can be combined into portlets and displayed on portal pages. In addition to the portal pages, there are the application portals. On this page, the most important contents of the application will be provided to the user. The number and alignment of the portlets on a portal page can be individually adjusted by each user with the appropriate access permissions.

2. Configuration of a Portal Page

The screenshot shows the 'Main Portal Configuration' settings page. At the top left is the 'ix' logo. Below it is a navigation bar with 'Home', 'System', and 'Extras'. The main content area is divided into several sections:

- Main Portal Configuration:** A central panel with expandable sections: 'Personal Settings...', 'Misc', 'Portal Settings', and 'Add Portlet'. Under 'Add Portlet', there are checkboxes for 'Annual report', 'Ansichtseite', 'Buddy List', 'Month report', 'New order proposals', and 'New order proposals'.
- Minutes:** A box stating 'There are currently no new news items'.
- Calendar:** A box stating 'There are currently no new appointments'.
- News Ticker:** A box stating 'No Ticker administ'.
- News:** A box stating 'There are currentl'.

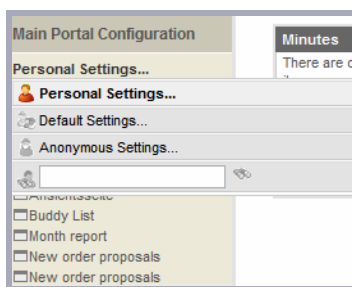

At the bottom of the page, there is a button labeled 'My Portal ...'.

The permission to *Adjust Main Portal* will be assigned under the *Extras / Portal Permissions* menu item (see *Permissions handbook*). Users with this permission have the ability to change portal settings that affect other users. Click on the link to *My Portal*, which you can find on every portal page, to open the *Main Portal Configuration*.

2.1. User-specific Settings

The portal page can be individually configured with *Personal Settings*. The properties and portlets set in this mode will only take effect for the currently logged on user. Click on *Personal Settings*.

With sufficient permissions, in addition to your individual settings, you can set the *Default Settings* (takes effect for all portal users) and the *Anonymous Settings* (affects anonymous users). The search field allows you to select, from the permissions holders, the user whose settings you as administrator wish to change. Please select the *Default Settings* now.

With the *Default Settings*, you will find yourself in administration mode. Here you will define the default settings for the portal page. These settings will take effect as soon as a user executes the action *Reset*, which discards all individual settings and restores the default settings.

If you, as administrator, execute the *Reset* action, the specific settings for all users will be discarded. Each user will now see the portal page in the configuration that you have defined as the default setting.

This applies as well to all portlets that you have included in this mode on the main portal page. Portlets that individual users additionally selected to view will be no longer shown after the reset.

2.2. Screen Effect

Here you have the ability to show animated window effects in the portal. Available are *Easter*, *Christmas*, and *Advertisement*. By clicking on the  tool symbol, the settings can be changed and new effects can be entered.

With *New Effect*, individual effects can be created. In so doing, an image file will be animated with the values you set.

User Rights ▾

Portal Settings ▲

Column Count

1 2 3 4 5

Portlet Border Offsets

Left/Right: 10 / 10 px

Top/Bottom: 10 / 10 px

With the *Column Count*, you will define the number of columns to be used to display portlets on the portal page. Simply click on the desired number.

The *Portlet Border Offsets* define the distance from the portlet borders to the left or right-hand border of a neighboring portlet or to the border of the portlet page. The upper and lower border offset can be defined in pixels in the same way.

In *Portlet Layout*, you will define the border format that will be used for this portal page. Selecting *Standard Borders* will show the portlet title and a border around the portlet; by selecting *Empty Borders*, the title and border will be hidden.

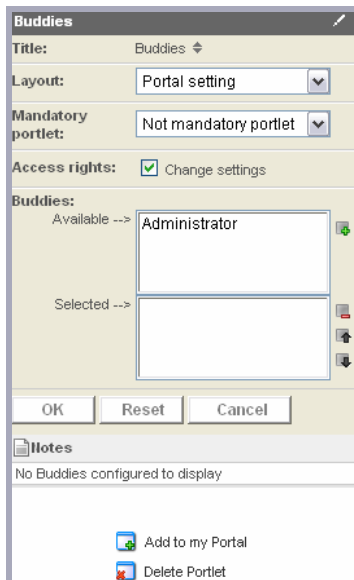

2.5. Create Portlet

New portlets will be created, based on portlet templates here. You can find more on the individual templates in the following chapters. Click the desired template here to create a new portlet.

A short description of the portlet template will be shown. Click  *Next*.

The portlet name can be changed here. Click on the  double arrow to enter the name in additional portal languages.

In the *Layout* selection list, you can define whether the portal setting should define the appearance of the new portlet or if it should be displayed in *Standard Border*, or with the layout *Empty Border*.

If desired, the new portlet can be defined as a *Mandatory Portlet* for *All Users*. The selection *Not for Anonymous* has the effect of making the portlet mandatory for all users that have logged on.

Selecting the setting to *Adjust Settings* allows users to edit the portlet properties for the portal.

The further settings differ depending on the portlet type you have selected. Descriptions for the individual types can be found in the following chapters. Click  *OK* to create the portlet. As soon as you click on the link to *Add to My Portal*, the portlet will be shown on the portal page.

2.6. Search Portlet

Here you can search by the title or name of a portlet. A link to the settings of the portlets found will be output underneath the search field.

2.7. Add Portlet

Here you will find the list of all existing portlets, from which you can select a portlet to be shown on the portal page.

2.8. Administrate Portlets

Portlets can be moved via drag & drop horizontally and vertically, as well as into other columns of the portal page.

To do so, simply click on the title bar and drag the portlet to the desired position.

On mouse contact, symbols will be shown in the title bar, with which you can *Minimize* the portlet, meaning reduce it to show only the title bar, as well as *Maximize* it.

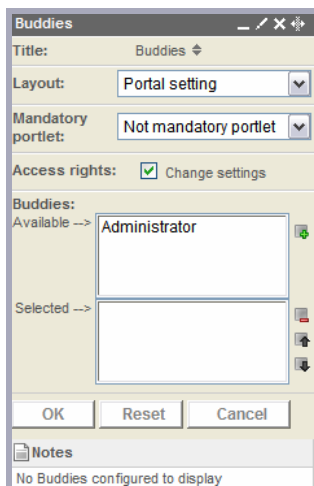

You can *Change Portlet Configuration*, *Delete* the portlet, and *Adjust Portlet Size*. If you drag the mouse on the arrow symbol at the right-hand border of the title bar, the portlet can be stretched over multiple columns.

3. General Portlet Settings

Every portlet on a portal page can be individually configured, if the setting *User Permissions – Adjust Settings* has been selected in the default settings for the portlet and/or the permission has been given to change settings for the main portal (menu *Extras / Portal Permissions / Main Portal Setup*).

If one of these requirements has been filled, you will see an  edit symbol in the upper right-hand corner of the portlet, through which you can view and edit the settings.

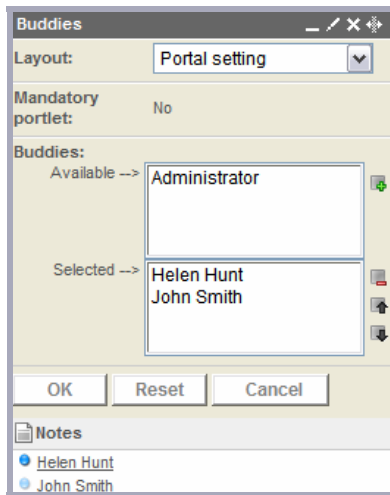

Clicking on  *OK* saves the settings; *Reset* returns all settings to the configuration that has been set in the default settings for the portlet.

4. Buddies Portlet

In the *Buddies* portlet, you can enter the users with whom you are frequently in contact. Clicking on the name of a colleague in the portlet shows additional information, such as their contact data.

The  symbol in front of the name of a user shows whether the user is currently logged on to the portal. Clicking this symbol will open the messenger window, allowing a message to be sent (see *Messenger* chapter). Additional information on the topic of user information can be found in the  *Application Designer* handbook. Click on the  edit symbol in the upper right corner of the title bar.

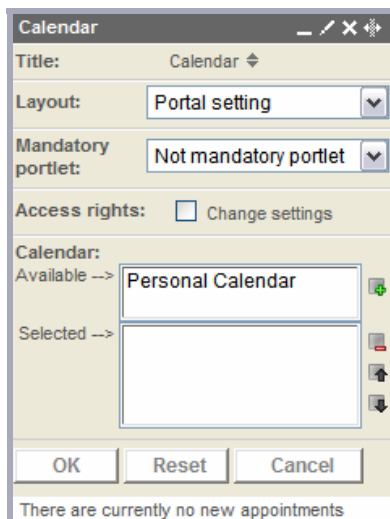

Move the colleagues that you wish to show in the portlet, with the help of the  plus symbol, from the *Available* list to the *Selected* list. With the arrow buttons, you can change the order of the list. Confirm the new settings by clicking  *OK*.

5. Calendar Portlet

In the calendar portlet, current daily appointments from all kinds of calendar applications can be shown, and edited by clicking on a link.

Move the calendar, the appointments of which you wish to display, with the help of the  plus symbol from the *Available* list to the *Selected* list.

6. Ticker Portlet

News items will be displayed in this portlet. In the delivery package of Intrexx Xtreme, a ticker portlet has already been entered to the portal. The portlet has been configured to display news items from www.internetnews.com.

To display its contents, internet access must be available. If access to the internet is only possible for the server through a proxy server, the connection details must be entered in the portal properties (see [Center handbook](#)).

 Various news services offer up-to-date ticker contents, mostly in the form of an RSS file, which you will download from the internet with the ticker. Please note that the contents may be protected intellectual property, and in such cases can only legally be shown with permission of the publishers.

Click on the  edit symbol in the upper right-hand corner of the portlet to edit the settings.

The screenshot shows the "News Ticker" configuration dialog box. It contains the following fields and options:

- Title:** News Ticker
- Layout:** Portal setting
- Mandatory portlet:** Not mandatory portlet
- Access rights:** Change settings
- Title:** internetnews.com
- URL:** http://headlines.internet.cc
- Transformation:** Default
- Validity:** 600 Sec.
- Ticker:**
- Width / Height:** 275 x 120 px
- Direction:** Up
- Speed:** 75 ms

Buttons at the bottom: OK, Reset, Cancel.

Enter the *Title* here, which will be used as the portlet title. Enter the *URL* to the RSS file. In the *Transformation* selection list, you will set the way in which the contents of news items will be output. The *Default* setting will show news items, one after another, in blocks. The setting *Single-line* will output news items in one line.

Choosing the *User* setting will show an edit field, in which an XSL stylesheet can be integrated with individual presets for the ticker transformation. The *None* setting will show the text without any additional changes.

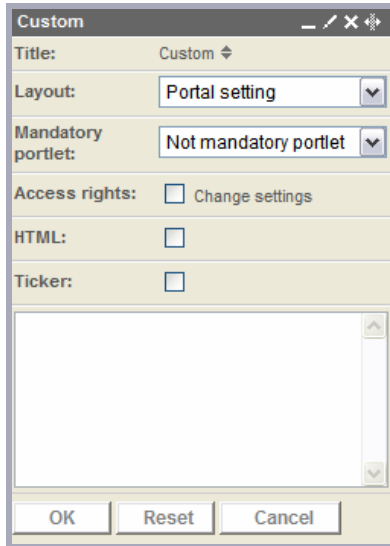

In the *Validity* field, you will enter the length of time (in seconds) the data will be held in the cache before the ticker requests new data.

The *Ticker* setting allows you to activate animation for the text. In the *Width* and *Height* field, enter the display size of the ticker in pixels. With *Direction*, you will define the direction in which the text travels in the ticker. In the *Speed* field, enter the speed at which the text travels in milliseconds.

The ticker can be stopped, or if it has been stopped, started again simply by clicking on the news text in the portlet.

7. Custom Portlet

With the user-defined portlet, all kinds of text, including text formatted in HTML, can be shown on the main portal page.

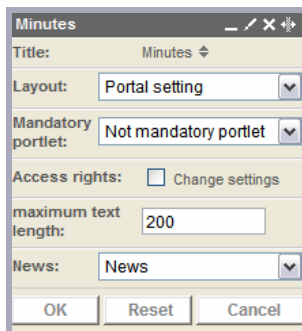

Any kind of text can be entered here, which will be shown in the portlet. The setting for *HTML* will cause the text to be output as HTML. All HTML tags will be interpreted. Without this setting, normal text will be output. With the *Ticker* setting, the contents will be shown as a ticker.

An example for the use of a custom portlet to display the local weather forecast can be found on the United Planet service portal *Intrex Live!* in the download area for applications (*Weatherportlet*).

8. News Portlet / Minutes

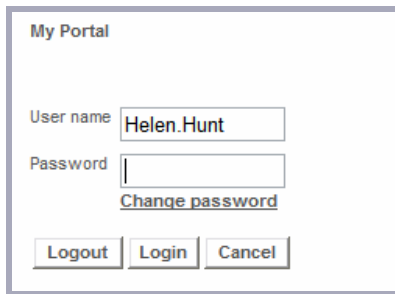

In a newly created portal, the portlets *News* and *Minutes* will have already been entered to the main portal page. The *News* portlet shows entries from newsletter applications, and the *Minutes* portlet shows entries in meeting summary applications.

In the *Maximum text length* field, enter the maximum number of characters that can be shown in the text of a news or minutes item. With the *News* option, news that has already been read will no longer be shown in the portlet. The setting for *News + Quick Hide News* allows news and/or minutes to be highlighted and set to *Read*.

Clicking the  icon will hide the marked entries in the portlet. With the *All News* setting, all news and/or minutes will be shown. With sufficient access permissions, the news item or meeting summary can be opened by clicking its header.

9. Login Portlet

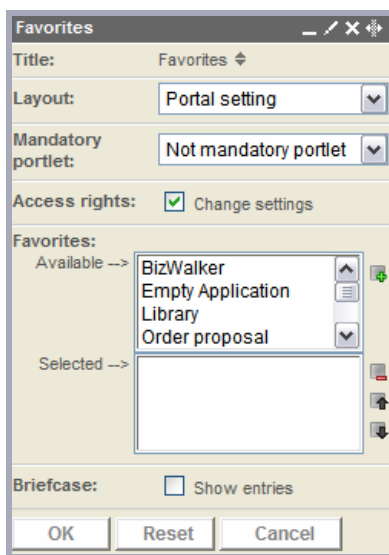

The screenshot shows a web form titled "My Portal". It contains the following elements:

- A "User name" label followed by a text input field containing "Helen.Hunt".
- A "Password" label followed by a text input field.
- A link labeled "Change password" below the password field.
- Three buttons at the bottom: "Logout", "Login", and "Cancel".

With this portlet, a user can log onto the portal. The portlet will be hidden for logged on users. A further possibility for login is offered by the *Login button* additional control. Information on this topic can be found in the [Portal Designer handbook](#).

10. Favorites Portlet

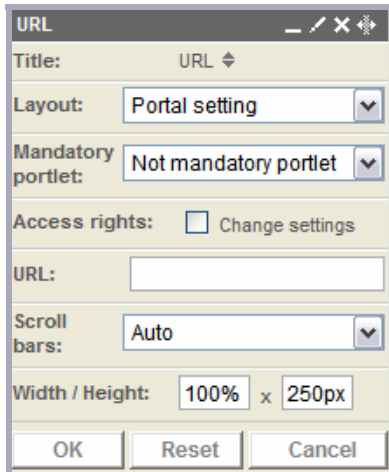

The screenshot shows a configuration dialog box titled "Favorites". It contains the following elements:

- "Title:" field with a dropdown menu set to "Favorites".
- "Layout:" dropdown menu set to "Portal setting".
- "Mandatory portlet:" dropdown menu set to "Not mandatory portlet".
- "Access rights:" section with a checked checkbox for "Change settings".
- "Favorites:" section with two lists:
 - "Available -->" list containing: BizWalker, Empty Application, Library, Order proposal.
 - "Selected -->" list, which is currently empty.
- "Briefcase:" section with an unchecked checkbox for "Show entries".
- Buttons at the bottom: "OK", "Reset", and "Cancel".

With this portlet, frequently used applications can be reached quickly. Highlight the application that you wish to include in the portlet in the list *Available* and move it, with the help of the  plus symbol, to the *Selected* selection list.

With the setting *Show briefcase entries*, you can additionally show all links to application pages that you have added to your briefcase. Information on the *Briefcase* additional control can be found in the [Portal Designer handbook](#).

11. Portlet URL

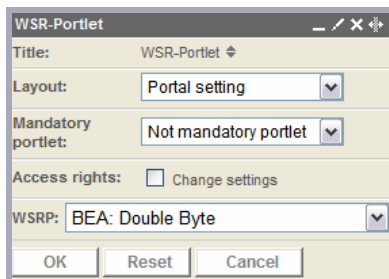

The screenshot shows a dialog box titled "URL" with the following fields and options:

- Title: URL
- Layout: Portal setting
- Mandatory portlet: Not mandatory portlet
- Access rights: Change settings
- URL: (empty text field)
- Scroll bars: Auto
- Width / Height: 100% x 250px
- Buttons: OK, Reset, Cancel

With this portlet, a website of your choice can be shown on the portal page. Enter the URL in the *Link* field. For *Scroll Bars*, the settings *Auto*, *Yes*, and *No* can be selected. Under *Width / Height*, enter the dimensions in which the portlet should be displayed on the portal page. The width will be defined in percent in proportion to the column width, whereas the height can be entered in pixels.

12. Portlet WSRP

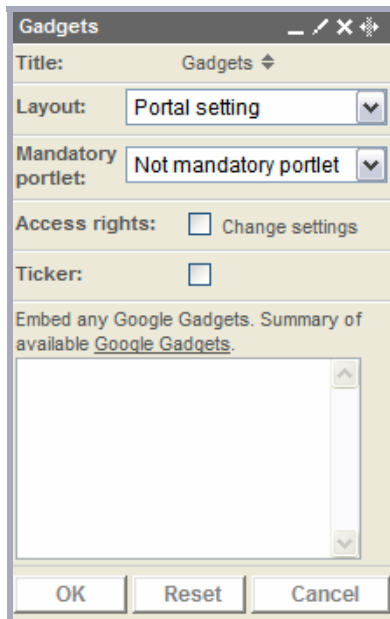

The screenshot shows a dialog box titled "WSRP-Portlet" with the following fields and options:

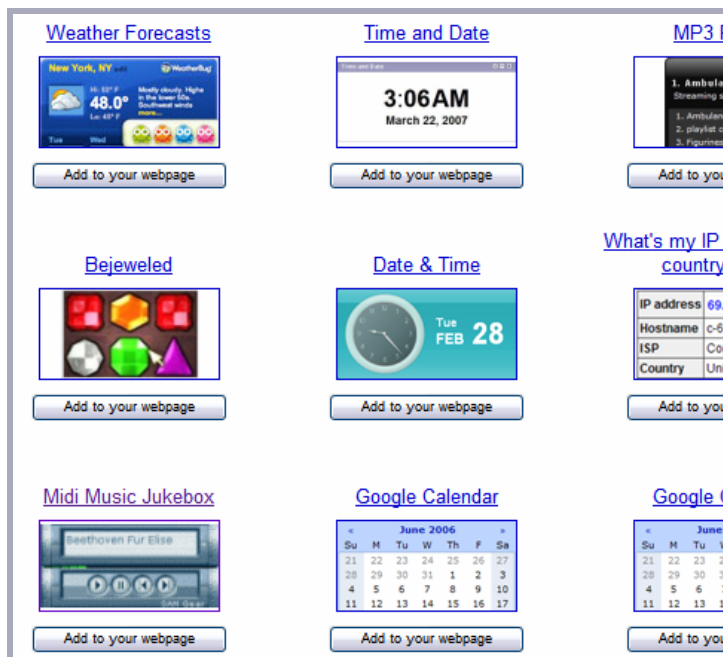

- Title: WSRP-Portlet
- Layout: Portal setting
- Mandatory portlet: Not mandatory portlet
- Access rights: Change settings
- WSRP: BEA: Double Byte
- Buttons: OK, Reset, Cancel

With this portlet type, you can create WSRP-Portlets from providers that you have registered in the Integration Center. You can learn how to register WSRP providers in the handbook  *Integration Center*. Simply select the desired portlet here.

13. Portlet Gadgets

Google offers a large selection of interactive mini-applications, which you can offer quite easily in an Intrex Xtreme portlet on a portal page. You can reach an overview of the available gadgets can be via the link *here*, which will take you to Google's offerings.

For a desired gadget, click on  *Add to your webpage*.

This is a preview of what the gadget would look like on your page. If parts of the gadget appear cut off, try increasing the width and/or height. [More about this gadget.](#)

Live Weather

Tip: Drag the bottom right corner of the preview above to resize the gadget.

Display settings		Gadget settings	
Title	<input type="text" value="Live Weather"/>		
Width	<input type="text" value="320"/> px		
Height	<input type="text" value="224"/> px		
Border	<input checked="" type="checkbox"/>		
			

Click here on [Get the Code](#). In the lower part of the page, the HTML code will now be shown.

Copy and paste the HTML below to include this gadget on your webpage.

```
<script src="http://gmodules.com/ig/iframe?url=http://www.labpixies.com/campa
```

Copy the code and insert it into the portlet.

Gadgets

Title:

Layout:

Mandatory portlet:

Access rights: Change settings

Ticker:

Embed any Google Gadgets. Summary of available [Google Gadgets](#).

```
e&amp;synd=open&w=320&h=224&title=Live+Weather&border=%23ffffff%7C3px%2C1px+solid+%23999999&output=js">/script>
```

Next, click on [OK](#) to save the settings.

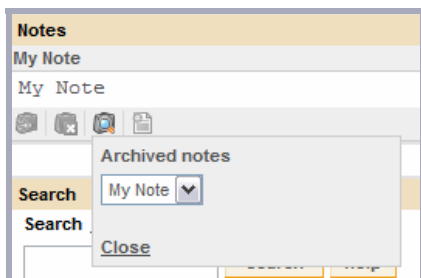

14. Notes Portlet

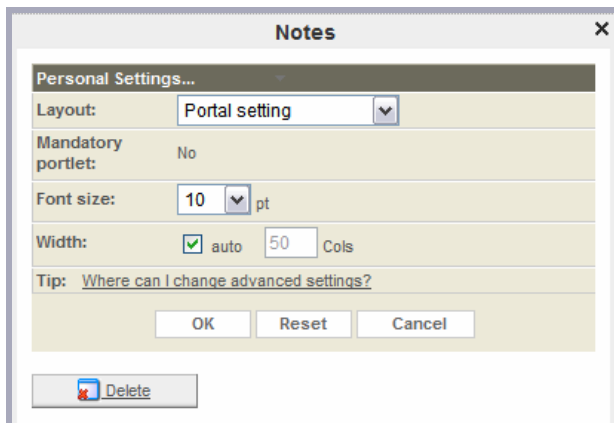

You can write directly in the notes portlet. This provides to you an edit field on the portal page for use, in which you can effortlessly save and edit text passages of your choice. If you wish to save a note, simply click on  *Save current note to archive*.

A title can be entered here. If the title has already been assigned to another saved note, this note can be replaced with the current note, if the setting to *Replace a saved note* has been activated.

After a note has been saved, you will see the icon to  *Show archived notes*. Selecting this button will show a selection list, from which a note can be selected and loaded in the portlet.

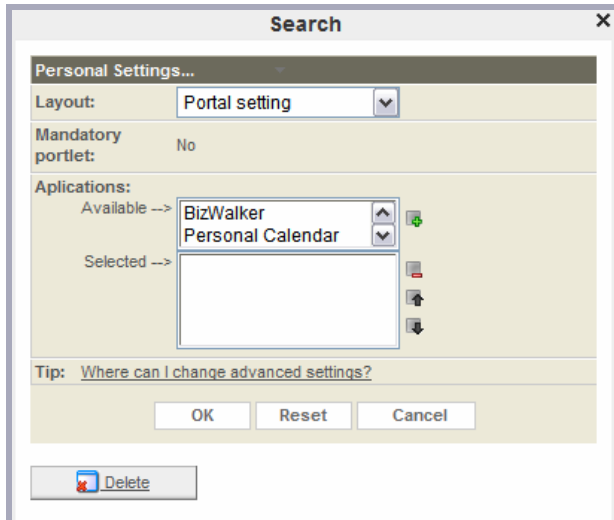

In *Font Size*, the size of the text can be preset. If the *Dynamic Width* is set, the line break will orient itself to the width of the portlet. The width can also be set as a fixed number of characters. This will increase the size of the portlet if the number of characters is greater than the width of the portlet. Otherwise, the portlet size will be retained.

15. Search Portlet

With this portlet type, a selection of portal applications can be put together, which will be searched through for the search term entered here.

In the settings, the desired applications will be added to the *Selected* list by clicking *Add*. With *Remove*, applications can be removed from the search.

The position of the applications in the *Selected* list can be changed with the help of the *arrow symbols*. The applications will be searched through in the order defined here. The search results will be shown directly in the portlet in link format, so that by clicking on a result, one can switch quite easily to the corresponding application.

16. Office Integration Portlet

You can find this portlet in every newly created Intrexx Xtreme portal on the main portal page. You can install the Office add-in for Intrexx Xtreme Office Integration here and later use it to reach all active Office integrations. You can find a complete description of this in the handbook *Office Integration*.

17. Messenger

17.1. Sending and Receiving Messages

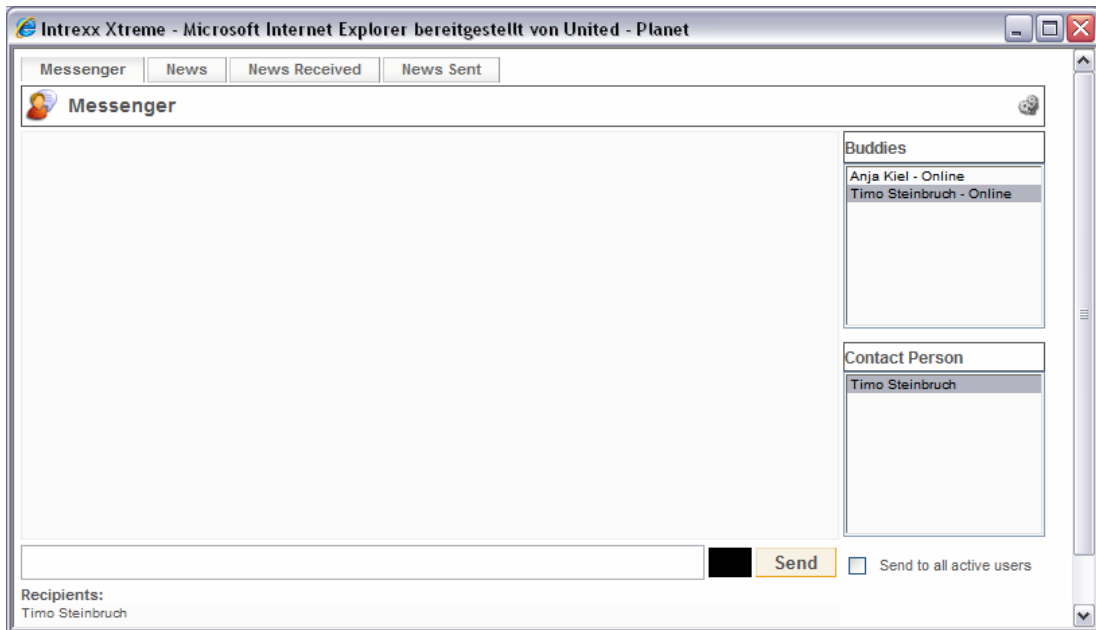

The messenger in Intrexx Xtreme is first available after it has been activated in the portal properties (see *Center handbook*). After activating it, the portal must be restarted.

Users require the *Messenger* portal permission in order to use the messenger (see *Permissions handbook*). You can reach the messenger through the *Buddies* portlet in the main portal. The messenger window can also be opened via a view field with the control type *User Information* (see *Application Designer handbook*).

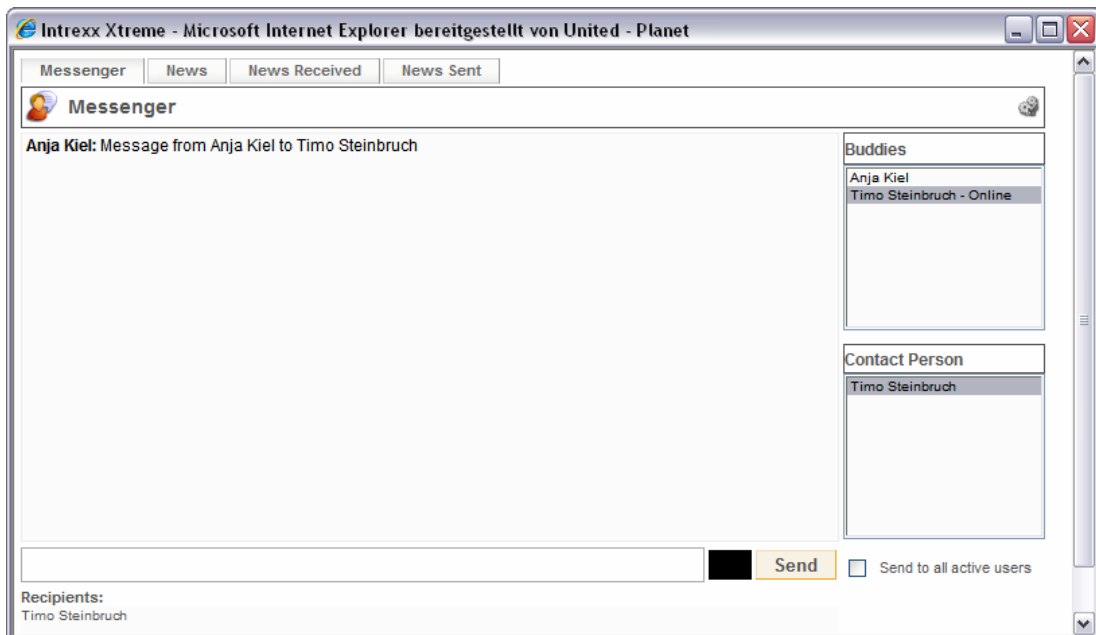

A message to a selected user can be composed by clicking the online status icon. If the selected user is not currently logged onto the portal, this symbol will be displayed as not active.

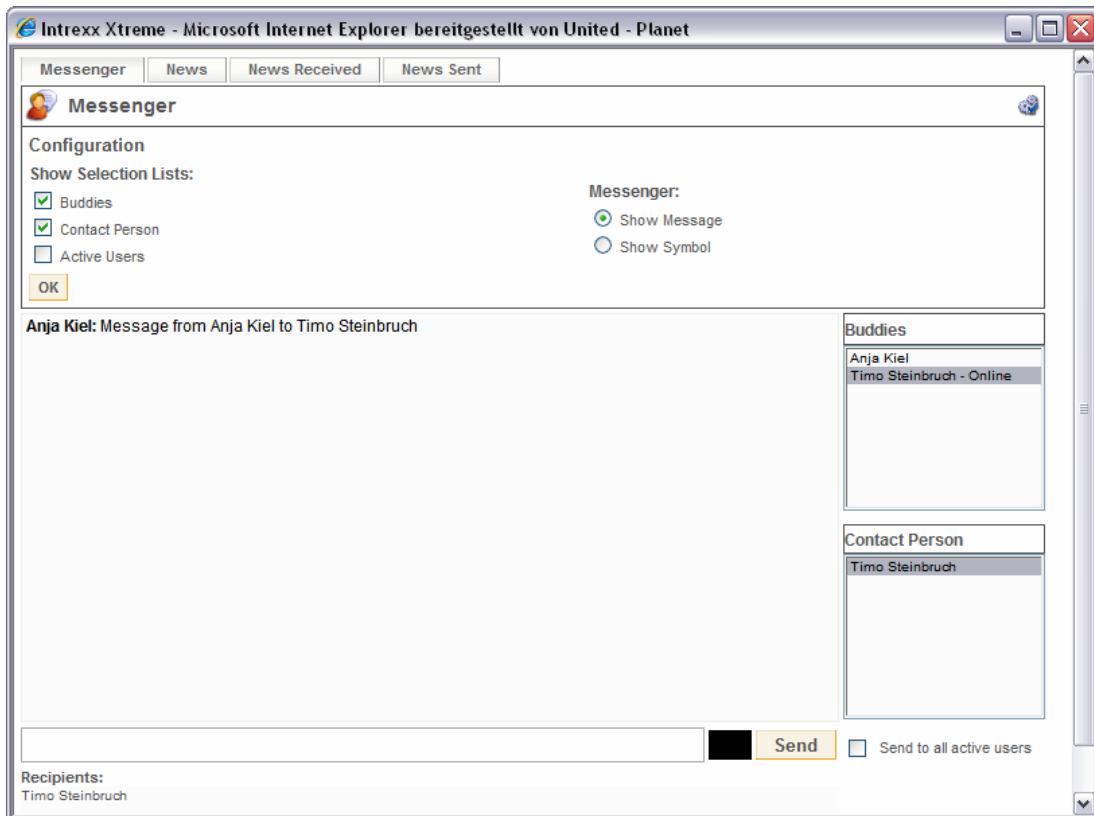

Click on the online status icon in order to open the messenger window.

Enter your message text here. If you click on the color field to the right of the edit field, a small palette will open, from which you can select a color. This will form the background color of your message. Next, click  *Send*. The message will be shown for the recipient in the lower right area of the portal briefly. The message will be shown for the recipient and the sender in the messenger window.

In the *Buddies* list, all colleagues from the *Buddy List* portlet will be shown. Select the desired recipient for your message here. In the *Active users* list, all users will be shown that you have sent messages to recently. With the setting to *Send to all active users*, your message will be sent to all users that are currently logged onto the portal. Clicking  *Adjust Settings* will open the settings dialog.

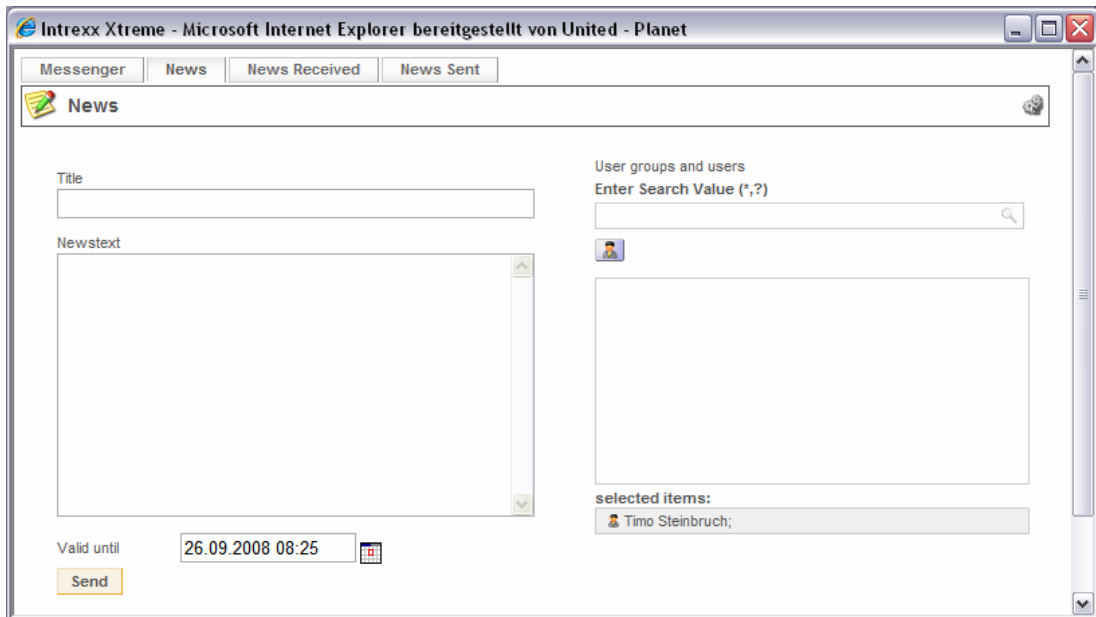

Activating the *Buddies* setting will show the *Buddies* selection list in the messenger window. The *Contact Person* setting will show an additional selection list, from which the current users in contact with the user will be shown. The *Active Users* setting will show the *Send to all active users* checkbox in the messenger window. New messages will be shown in a box in the lower right of the portal if the *Show Messages* option is selected. With the *Show Symbol* option, you will be made aware of a new message with a symbol instead.

In the menu *Extras / Portal Permissions*, you will define which users may use the messenger to send messages. Regardless of what you choose here, all received messages will be shown. Administrators can send messages to all users that are logged onto the portal, and they will be received by the users.

- ⓘ Please note that messages will not be saved and after closing the messenger window, these messages will no longer be available.

17.2. News

On the *News* tab, news can be composed and sent.

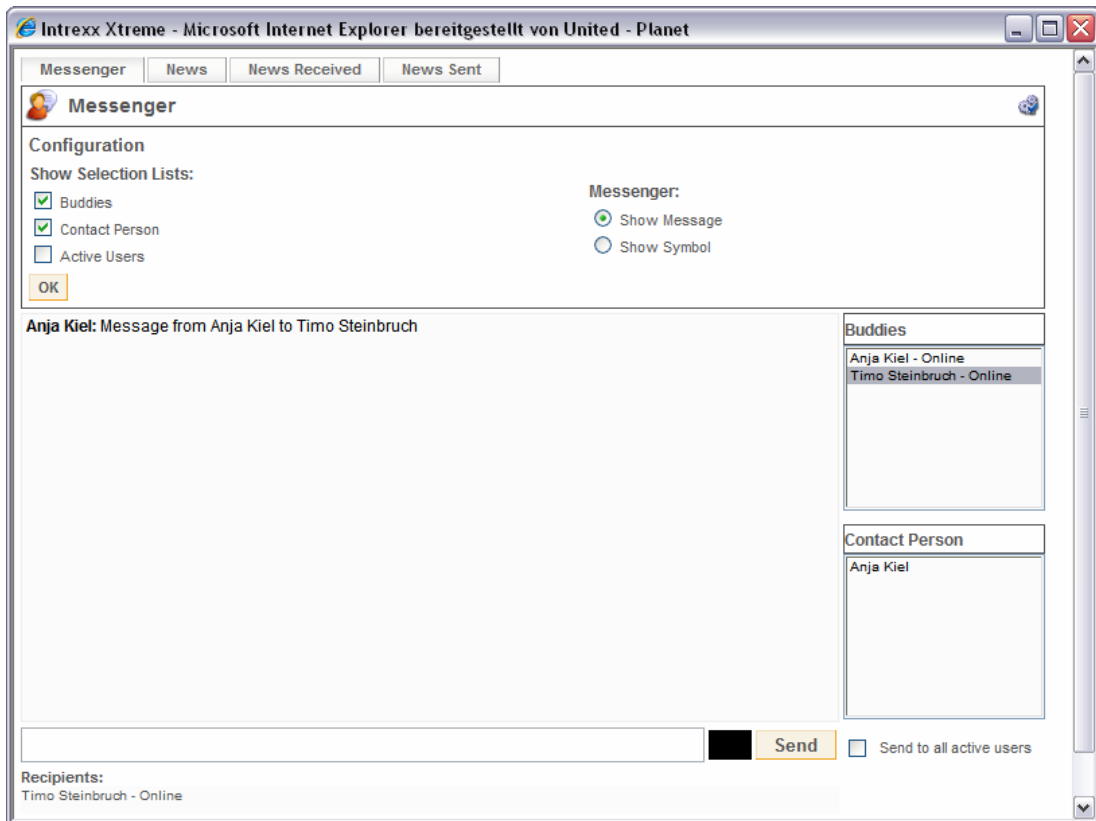

Enter a *Title* and the *News text*. In the *Valid until* field, you will define the length of time the news will be shown in the *News* portlet. Select one or more recipients from the *User groups and users* list.

By clicking  *Send*, the news will be sent. The news will be shown for recipients in the messenger window on the *Received news* tab, and for the sender on the *Sent news* tab. The messenger window can be opened again at any time via the *My Buddies* portlet.

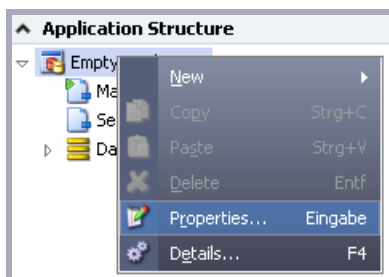

With  *Delete Selected News*, the news will be deleted that the recipient has marked by clicking their checkbox. With the small calendar, you can show news that were received on the selected date. If you click on  *Adjust Settings*, the settings options for the distributor will be shown.

Here you will define whether users, groups, or both will be shown as possible recipients for news.

18. Portlets on a Portal Page

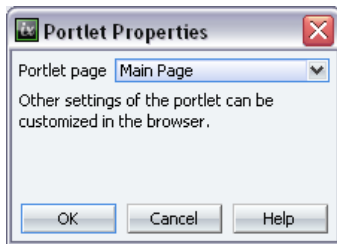

Every view page on the uppermost level of an application can be defined as a portlet. Open the application properties by double-clicking on the application node or via the context menu item *Properties*.

Switch to the *Portlets* tab.

Click on ➡ *Add Portlet*.

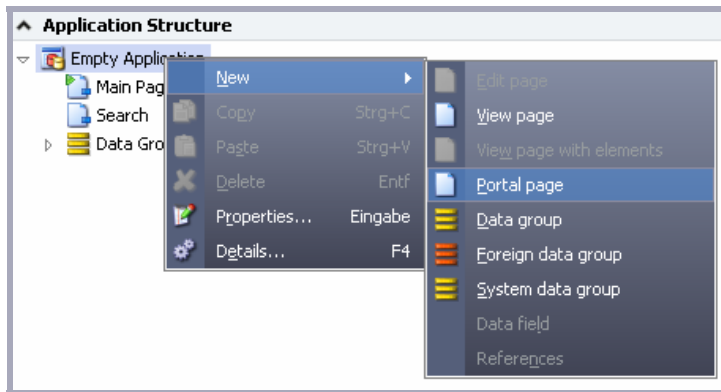

In the list above, all pages that can be used as portlets will be offered for selection. Select the desired page and confirm by clicking *OK*.

Save the application. The portlet will now be shown for selection in the portlet list on portal pages.

19. Portlets in the Application Portal

An application portal will be created in the Application Designer with a special page type, the portal page. Every application may contain one or more portal pages. Every newly created portal page automatically contains a portal element, in which view pages can be included as portlets. Portal pages can be entered to every level of the application structure. Open an application in the Application Designer. A portal page can be entered via the application node or a data group.

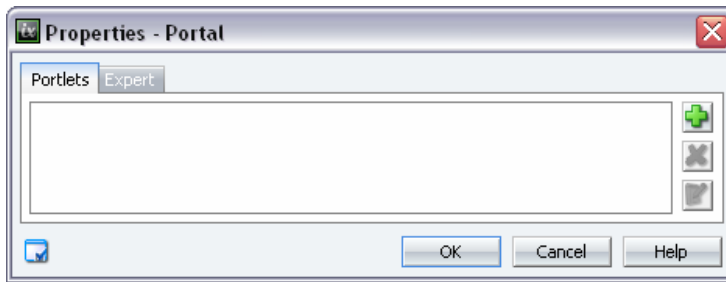

With the context menu item *New / Portal Page*, a new portal page will be created.

An application portal can be assigned view pages from the same level or from super-ordinate data groups.

On the portal page, you will find the portlet element. Open the properties dialog with a double-click.

Click ➔ *Add Portlet*.

Select the page here that will be shown as a portlet in the application portal. Confirm the new settings with ➔ *OK* and save the application.

You can find additional information on this topic in the ➔ *Application Designer* handbook.
